

Some Facts about Mental Health

Prevalent Health Problem

Mental health issues are the most prevalent health problems in America. They are more common than cancer, lung, and heart disease combined.

Hope for Recovery

If you or someone you know is experiencing difficulty, there is hope for recovery with proper treatment and supports. New developments have led to successes not experienced in the past.

Early Intervention

As with many medical disorders, early identification and treatment increases the prospects for recovery and reduces the harm and suffering of a longer course of illness.

Treatable Medical Disorders

Anxiety Disorders, Chronic Depression, Bipolar Disorder, and Schizophrenia are treatable medical disorders. They are not reflective of a person's character, intelligence, or "will power".

Search for Recovery

Many treatments are available. If one treatment does not work for you, don't lose hope. Try another therapy or therapist. Peer-supports and recovery-oriented initiatives have also helped many individuals. Other supports are available from private and state service providers.

When to Seek Help

The American Psychiatric Association identifies when to seek help:

- Marked personality change
- Excessive anxieties
- Extreme highs & lows
- Prolonged depression and apathy
- Marked changes in eating or sleeping
- Inability to cope with problems & daily activity
- Abuse of alcohol or drugs
- Strange or grandiose ideas
- Excessive anger, hostility, or violent behavior
- Seek immediate help if thinking or talking about suicide or homicide.
